1. Which objects appear to move across the sky?

2. In which direction do objects appear to move across the sky?

3. The motion of objects in the sky is a result of:

   The Earth _______________________________________________________
   The Moon _______________________________________________________
   The Earth and all other planets ____________________________________
   The stars _______________________________________________________

4. Explain why the North Star appears to remain stationary. __________________________
   ____________________________________________________________________

Draw a diagram below demonstrating what causes objects to appear to move across the sky.
