Unit Two Information

EOCT Domain & Weight: Equations - 30%

Curriculum Map: Reasoning with Linear Equations & Inequalities

Content Descriptors:
Concept 1: Create equations that describe numbers or relationships.
Concept 2: Understand solving equations as a process of reasoning & explain the reasoning. Solve equations and inequalities in one variable
Concept 3: Solve systems of equations
Concept 4: Represent & solve equations & inequalities graphically.
Concept 5: Build a function that models a relationship between two quantities.
Concept 6: Understand the concept of a function and use function notation.
Concept 7: Interpret functions that arise in applications in terms of context.
Concept 8: Analyze functions using different representations.

Content from Frameworks:
Reasoning with Linear Equations & Inequalities

Unit Length: 15 Approximately days

Georgia Milestones Study Guide for Unit 2
**Unit Rational:**
Building on standards from middle school, students will analyze linear functions only. Students will:
- Investigate key features of graphs
- Create, solve, and model graphically linear equations and inequalities in one and two variables
- Create, solve and model graphically systems of linear equations in two variables
- Create and interpret systems of inequalities where applicable; for example, students will create a system to define the domain of a particular situation, such as situation limited to the first quadrant; the focus is not on solving systems of inequalities
- Rearrange formulas to highlight a quantity of interest
- Recognize arithmetic sequences as linear functions

Some of the Unit 2 standards will be repeated in Units 3, 4, and 5 as they also apply to quadratic and exponential functions.

**Prerequisites: As identified by the GSE Frameworks**
- Using the Pythagorean Theorem
- Understanding slope as a rate of change of one quantity in relation to another quantity
- Interpreting a graph
- Creating a table of values
- Working with functions
- Writing a linear equation
- Using inverse operations to isolate variables and solve equations
- Maintaining order of operations
- Understanding notation for inequalities
- Being able to read and write inequality symbols
- Graphing equations and inequalities on the coordinate plane
- Understanding and use properties of exponents
- Graphing points
- Choosing appropriate scales and label a graph

</table>
and exponential functions (integer inputs only).

**MGSE-12.A.CED.2**  
Create linear, quadratic, and exponential equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales. (The phrase “in two or more variables” refers to formulas like the compound interest formula, in which \( A = P(1 + \frac{r}{n})^{nt} \) has multiple variables.)

**MGSE-12.A.CED.3**  
Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret data points as possible (i.e. a solution) or not possible (i.e. a non-solution) under the established constraints.

**MGSE-12.A.CED.4**  
Rearrange formulas to highlight a quantity of interest using the same reasoning as in solving equations. Examples: Rearrange Ohm’s law \( V = IR \) to highlight resistance \( R \); rearrange area of a circle formula \( A = \pi r^2 \) to highlight the radius \( r \).

**their own steps, or if given two or more steps of an equation, explain the progression from one step to the next using properties.**

**MGSE-12.A.REI.3**  
Solve linear equations and inequalities in one variable, including equations with coefficients represented by letters. *(For example, given \( ax + 3 = 7 \), solve for \( x \))

**MGSE-12.A.REI.6**  
Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.

**MGSE-12.A.REI.11**  
Using graphs, tables, or successive approximations, show that the solution to the equation \( f(x) = g(x) \) is the \( x \)-value where the \( y \)-values of \( f(x) \) and \( g(x) \) are the same.

**MGSE-12.A.REI.12**  
Graph the solution set to a linear inequality in two variables.
# TCSS – Accelerated GSE Algebra 1/Geometry A – Unit 2

## Sample Assessment Items

### MGSE9-12.A.REI.1

Given that the following trapezoid has an area of 54 cm², what is the length of the unknown base?

\[
\text{Area of a Trapezoid} = \frac{1}{2} (\text{base}_1 + \text{base}_2) \times \text{height}
\]

- **a.** 1 cm
- **b.** 5 cm
- **c.** 8 cm
- **d.** 16 cm

![Trapezoid Diagram](image)

**A.** Subtract R from both sides.  
**B.** Divide both sides by R.  
**C.** Subtract V from both sides.  
**D.** Divide both sides by I.

### MGSE9-12.A.REI.5

What is the solution for the system of equations represented by:

\[
4x - 2y = 12 \quad \text{and} \quad x = \frac{1}{2} y + 3
\]

- **A.** (4,2)  
- **B.** (1, ½)  
- **C.** Infinitely many  
- **D.** No solution

### MGSE9-12.A.REI.10

Which of the following is NOT a solution of the equation represented by the graph?

- **A.** (4,2)  
- **B.** (1, ½)  
- **C.** Infinitely many  
- **D.** No solution

---

**TCSS**  
**9/21/2015**
Which equation shows $6(x + 4) = 2(y + 5)$ solved for $y$?

A. $y = x + 3$
B. $y = x + 5$
C. $y = 3x + 7$
D. $y = 3x + 17$

Let $a$, $b$, and $c$ be constants, and let $x$ be a variable. Which of the following is equivalent to $a(x + b) < c$ when $a < 0$?

A. $x < c - b$
B. $x > c - b$
C. $x > c - a$
D. $x < c - a$

Estimate the solution of the equation $a(x) = b(x)$?

A. $(0, 2)$
B. $(1, 0)$
C. $(3, -4)$
D. $(4, -1)$
### Resources – Concept 1
- Instructional Strategies and Common Misconceptions
- Foldable Graphic Organizer – Cumulative
- Solving Literal Equations using variables (A.CED.4) – Power Point
- Video for solving literal equations

*These tasks were taken from the CCGPS Frameworks.*
- Lucy’s Linear Equations & Inequalities (A.SSE.1, A.CED.1)
- Forget the Formula (A.CED.2,3,4) – extend activity
- Cara’s Candles Revisited (A.CED.1&3) – extend activity
- M&M’s (A.CED.1,2 & A.REI.1) – activator

### Resources – Concept 2
- Instructional Strategies & Common Misconceptions
- Graphic Organizer – Properties of Real Number

*These tasks were taken from the GSE Frameworks.*
- Jaden’s Phone Plan (A.REI.3)

### Resources – Concept 3
- Instructional Strategies and Common Misconceptions
- Graphic Organizer Methods for Solving Systems of Equations
- Tic Tac Toe

*These tasks were taken from the GSE Frameworks.*
- Systems of Weights - Act 1 only (A.REI.5) activator
- Solving Linear Equations FAL (A.REI.6)
  - Good discussion
- Boomerangs (A.REI.5&6) – extension activity

### Resources – Concept 4
- Instructional Strategies & Common Misconceptions
- Graphic Organizer – graphing transformations (limit to linear)
- Tic Tac Toe Activity (A.REI.11)
- Kimi & Jordan activator/discussion

*These tasks were taken from the GSE Frameworks.*
- Talk is Cheap – great discussion and critical thinking task (A.REI.10&11)
- Detention Hall Buy Out Spotlight task with video (A.REI.11)
- Defining Regions Using Inequalities FAL (A.REI.12)

---

**MGSE9-12.A.REI.12**

Graph the following.

\[
\begin{align*}
2x - y & < 1 \\
y & \geq -3x + 1
\end{align*}
\]

(Students should do this on graph paper – not M/C)

*Answer*
## Textbook Resources
- Holt McDougal – Explorations in Core Math p67-78 *(A.CED.1)*
- P41-42 Performance Task

## Textbook Resources
- Holt McDougal – Explorations in Core Math p (102, 205-210)
- Holt McDougal – Explorations in Core Math p125-140 *(A.REI.12)*
- Holt McDougal – Explorations in Core Math p141-142 *(A.REI.12)* - extension problems

<td></td>
<td></td>
</tr>
</tbody>
</table>

**MGSE9-12.F.BF.2**
Write arithmetic and geometric sequences recursively and explicitly, use them to model situations, and translate between the two forms. Connect arithmetic sequences to linear functions and geometric sequences to exponential functions.

**MGSE9-12.F.IF.2**
Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.

**MGSE9-12.F.IF.3**
Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers. (Generally, the scope of high school math defines this subset as the set of natural numbers 1,2,3,4...) By graphing or calculating terms, students should be able to show how the recursive sequence \( a_1 = 7, a_n = a_{n-1} + 2 \); the sequence \( s_n = 2(n-1) + 7 \); and the function \( f(x) = 2x + 5 \) (when \( x \) is a natural number) all define the same sequence.

**MGSE9-12.F.IF.5**
Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. For example, if the function \( h(n) \) gives the number of person-hours it takes to assemble \( n \) engines in a factory, then the positive integers would be an appropriate domain for the function.

**MGSE9-12.F.IF.6**
Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.

**MGSE9-12.F.IF.9**
Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a graph of one function and an algebraic expression for another, say which has the larger maximum.
What is a sequence and how can a sequence model be written as a function?

Vocabulary
- Linear Model
- Sequence
- Recursive
- Explicit
- Arithmetic sequence

Vocabulary

Sample Assessment Items

MGSE-9.12.F.BF.1
Katherine has $140 in the bank and is saving $6 per week. Abbie has $462 in the bank, but is spending at a rate of $10 per week. Which equation will determine when they will have the same amount of money in the bank?

a. 140 + 6x = 462 + 10x
b. 140 + 6x = 462 - 10x
c. 140 - 6x = 462 + 10x
d. 140 + 10x = 462 - 6x

MGSE-9.12.F.BF.1a
A small swimming pool initially contains 400 gallons of water, and water is being added at a rate of 10 gallons per minute. Which expression represents the volume of the pool after t minutes?

<table>
<thead>

MGSE-9.12.F.BF.1b
Which function is modeled in the table?

a. \( f(x) = 2x - 5 \)
b. \( f(x) = x + 2 \)
c. \( f(x) = x + 5 \)
d. \( f(x) = 5x - 2 \)

MGSE-9.12.F.BF.1c
If \( f(5) = 2(5) - 7 \), which function gives \( f(x) \)?

a. \( f(x) = 2x \)
b. \( f(x) = 5x \)
c. \( f(x) = 2x - 7 \)
d. \( f(x) = 5x - 7 \)

MGSE-9.12.F.BF.1d
Turner Field, home of the Atlanta Braves, is capable of seating 56,790

MGSE-9.12.F.IF.1
Which function is modeled in the table?

a. \( f(x) = 2x - 5 \)
b. \( f(x) = x + 2 \)
c. \( f(x) = x + 5 \)
d. \( f(x) = 5x - 2 \)

MGSE-9.12.F.IF.1a
The graph can be described as:

a. a positive function that is increasing
b. a positive function that is decreasing
c. a negative function that is increasing
d. a negative function that is decreasing

MGSE-9.12.F.IF.2
Since Sally is selling 1 necklace at a time and cannot sell negative necklaces, a reasonable domain for this function is the whole numbers.

MGSE-9.12.F.IF.3
What is a reasonable domain for this function?

a. Write a function that describes the revenue \( R(n) \), in dollars, Sally will earn from selling \( n \) necklaces.

\( R(n) = 5.25n \)

b. What is a reasonable domain for this function?

Since Sally is selling 1 necklace at a time and cannot sell negative necklaces, a reasonable domain for this function is the whole numbers.

c. Graph the function.

MGSE-9.12.F.IF.4

MGSE-9.12.F.IF.5

MGSE-9.12.F.IF.6

MGSE-9.12.F.IF.7
d. $400(1.10)^t$

**MGSE9-12.F.BF.2**
The contents of the fuel tank of a car can be modeled by the function $g(x) = -0.04x + 15$, where $x$ is in miles driven and $g(x)$ represents the amount of fuel remaining in the tank in gallons. Sierra has traveled 200 miles. Which statement represents the amount of gas in gallons that she has left in her car?

a. $g(x) = 7$
b. $g(x) = 8$
c. $g(200) = 7$
d. $g(200) = 8$

**MGSE9-12.F.IF.3**
The first term in the sequence is -2.

<table>
<thead>

</table>

Which function represents the sequence?

a. $a_n = a_{n-1} + 1$
b. $a_n = a_{n-1} - 2$
c. $a_n = a_{n-1} + 5$
d. $a_n = a_{n-1} + 7$

**Fans.** For each game, the amount of money that the Braves’ organization brings in as revenue is a function of the number of people, $n$, in attendance. If each ticket costs $16, what is the domain of this function?

a. $0 \leq n \leq 56,790$
b. $16 \leq n \leq 56,790$
c. $0 < n \leq 908,640$
d. $16 < n \leq 908,640$

**MGSE9-12.F.IF.6**
The rate of change is constant. Determine the rate of change and what the rate of change means for the situation.

<table>

At the end of Unit 2 student’s should be able to say “I can…”

- Justify the solution of a linear equation and inequality in one variable.
- Justify the solution to a system of 2 equations in two variables.
- Solve a system of linear equations in 2 variables by graphing.
- Graph a linear inequality in 2 variables.
- Explain what it means when two graphs \( y = f(x) \) and \( y = g(x) \) intersect.
- Define and use function notation, evaluate functions at any point in the domain, give general statements about how \( f(x) \) behaves at different regions in the domain (as \( x \) gets very large or very negative, close to 0 etc.), and interpret statements that use function notation.
- Explain the difference and relationship between domain and range and find the domain and range of a function from a function equation, table or graph.
- Explain why sequences are functions.
- Interpret \( x \) and \( y \) intercepts, where the function is increasing or decreasing, where it is positive or negative, its end behaviors, given the graph, table or algebraic representation of a linear function in terms of the context of the function.
- Find and/or interpret appropriate domains and ranges for authentic linear functions.
- Calculate and interpret the average rate of change over a given interval of a function from a function equation, graph or table, and explain what that means in terms of the context of the function.
- Estimate the rate of change of a function from its graph at any point in its domain.
- Explain the relationship between the domain of a function and its graph in general and/or to the context of the function.
- Accurately graph a linear function by hand by identifying key features of the function such as the \( x \)- and \( y \)-intercepts and slope.
- Write recursive and explicit formulas for arithmetic sequences.
